

Absolute for Legal Services

Protect firm and client privacy across distributed devices

“

If you want to be pro-active by removing any sensitive data before a device is lost or stolen, and your end users' experience is important to you, Absolute is the product to get.

FULL-SERVICE, NATIONAL LAW FIRM

TRUST BEGINS WITH ASSURANCE

Clients trust you. This trust is built on their belief that you will protect their interests (and their data) at all times. Through your client engagements, employees gain access to various types of sensitive data — whether it be corporate, business, or personal information - putting your firm and your clients at risk.

Law firms require continuous line-of sight to every device, user, and application to be able to protect sensitive data, monitor security controls, and respond to risks swiftly and effectively. For IT and security teams, this creates new challenges. When sensitive information is scattered, persistent visibility and control is non-negotiable; it is the foundation of the entire security program.

Security Challenges:

- Inability to pinpoint sensitive data at-risk
- Dark devices in a distributed workforce
- Limited ability to manage devices, data, users, and applications across their fleet
- Lack of reliable mechanism to monitor the health of security apps and identify failures

DATA DISCOVERY THROUGH PERSISTENT ENDPOINT VISIBILITY

Absolute provides persistent endpoint visibility and control — on and off the corporate network, enabling you to have an undeletable line of sight to your devices, data, installed applications, and security controls at all times. With a panoramic view of your fleet, you'll be equipped to identify underutilized devices and applications so you can optimize fleet allocation and reduce costs. Using customizable automated alerts, you can stay on top of device risks – like unauthorized applications, disabled security controls, or devices drifting into unauthorized geographical zones.

Only Absolute automates endpoint hygiene. Our patented Persistence® technology is embedded in the firmware of devices shipped by 28 leading system manufacturers, ensuring your endpoints are resilient to software decay, collision, unintentional removal, or malicious actions.

KEY SOLUTIONS

- 1 Absolute Visibility**

Leverages the Absolute Persistence technology to provide always-on insights into hardware and software inventory, anti-malware and encryption status, and allows you to securely decommission endpoints remotely. This enables you to effectively provision, manage, and secure your devices and ensure they never go dark.
- 2 Absolute Erase**

Allows you to track and seamlessly remove any data across your endpoints, ensuring your most sensitive information always remains protected from leakage.
- 3 Absolute AppPersist**

Monitors and automatically remediates the health of security applications installed across your endpoints. This keystone technology equips you to enforce controls and maintain the security posture across your endpoints to increase the efficacy of critical applications such as anti-malware, encryption, and VPN.

KEY BENEFITS

- Persistent visibility across your distributed device fleet, regardless of OS reimaging, hardware changes, or factory resets
- Gain granular asset intelligence into your hardware and software use, equipping you to reduce waste and increase return on your technology investments
- Discover sensitive data across your endpoints and delete specific files or wipe the drive to protect business and personal information
- Continuous monitoring of security applications such as anti-malware, encryption, and VPN, with automated remediation of compromised applications
- Early detection of device risks such as unauthorized movement, disabled security controls, and hardware changes, so you can respond swiftly
- Continuous benchmarking of your assets and security controls against internal policies, industry standards, and regulatory frameworks

ABOUT ABSOLUTE

The Absolute Platform for Endpoint Resilience® enables devices and security controls to maintain a secure operational state automatically, without user intervention. Embedded in the firmware of over half a billion devices, Absolute is uniquely able to provide continuous visibility, control, and intelligence of the entire endpoint environment – data, devices, and applications. Our self-healing connection and granular endpoint telemetry allow IT and security teams to streamline device management, maintain compliance, remediate threats, and ensure that endpoint security controls are always installed, effective, and delivering their intended ROI.
